

**Figure S3.** Prognostic value of CDC42 effector protein 2 (CDC42EP2)-related genes in various types of cancer. The prognostic significance of CDC42EP2 expression was analyzed using the GEPIA2 database. Survival map of the genes positively associated with CDC42EP2 expression for overall survival (OS) (A) and disease-specific survival (DFS) (B). Survival map of the genes negatively associated with CDC42EP2 expression for OS (C) and DFS (D). Heat map presenting the  $\log_{10}$  (HR) of the genes in various types of cancer. A square with a bold border represents a  $p$ -value  $< 0.05$  in the survival analysis. HR, hazard ratio. (Continued on next page.)
